Overview and Dashboard

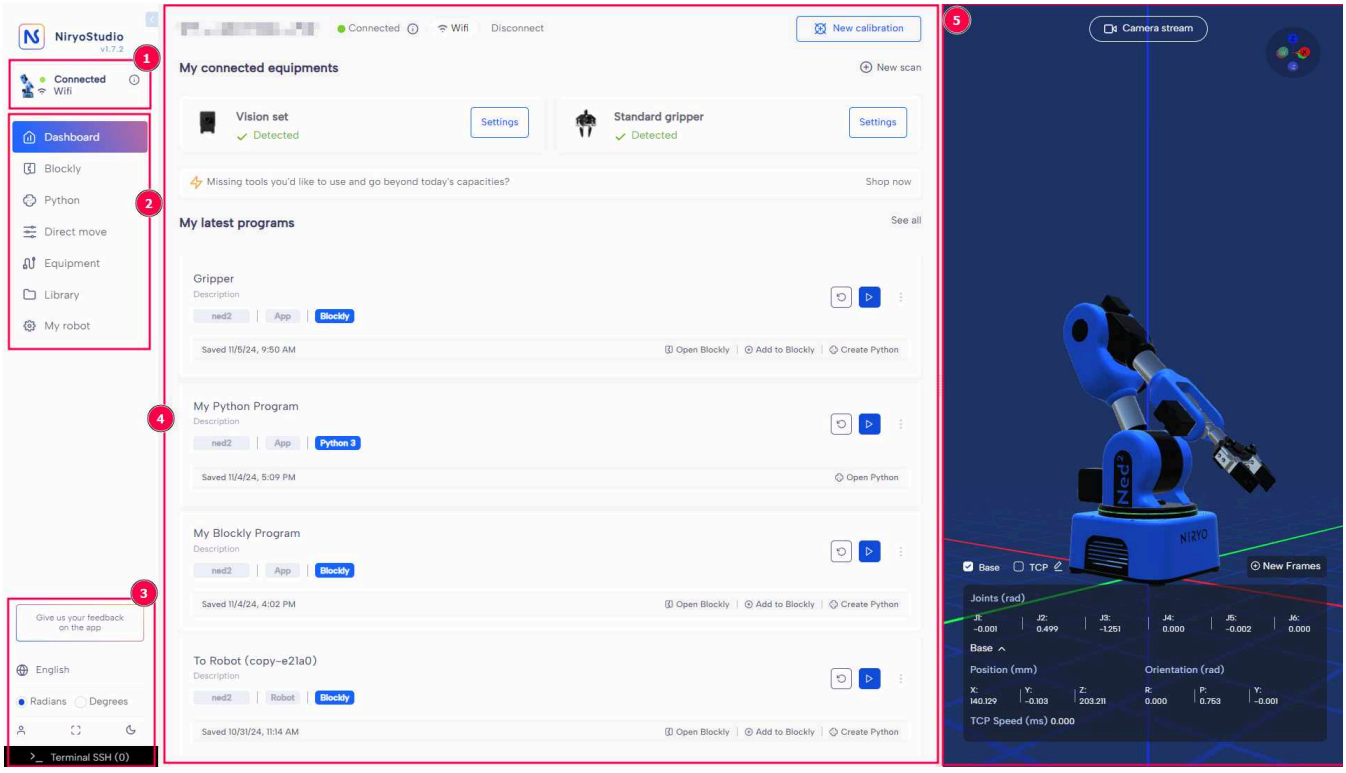

Brief introduction to the application layout and purpose of the interface structure.

The NiryoStudio Dashboard provides a centralized view for managing, programming, and controlling your Niryo robot. It is divided into several key areas, each designed to streamline access to essential features and information.

> Some screens are unavailable if your are not connected to a robot. (Direct move, equipments...)

NiryoStudio Layout

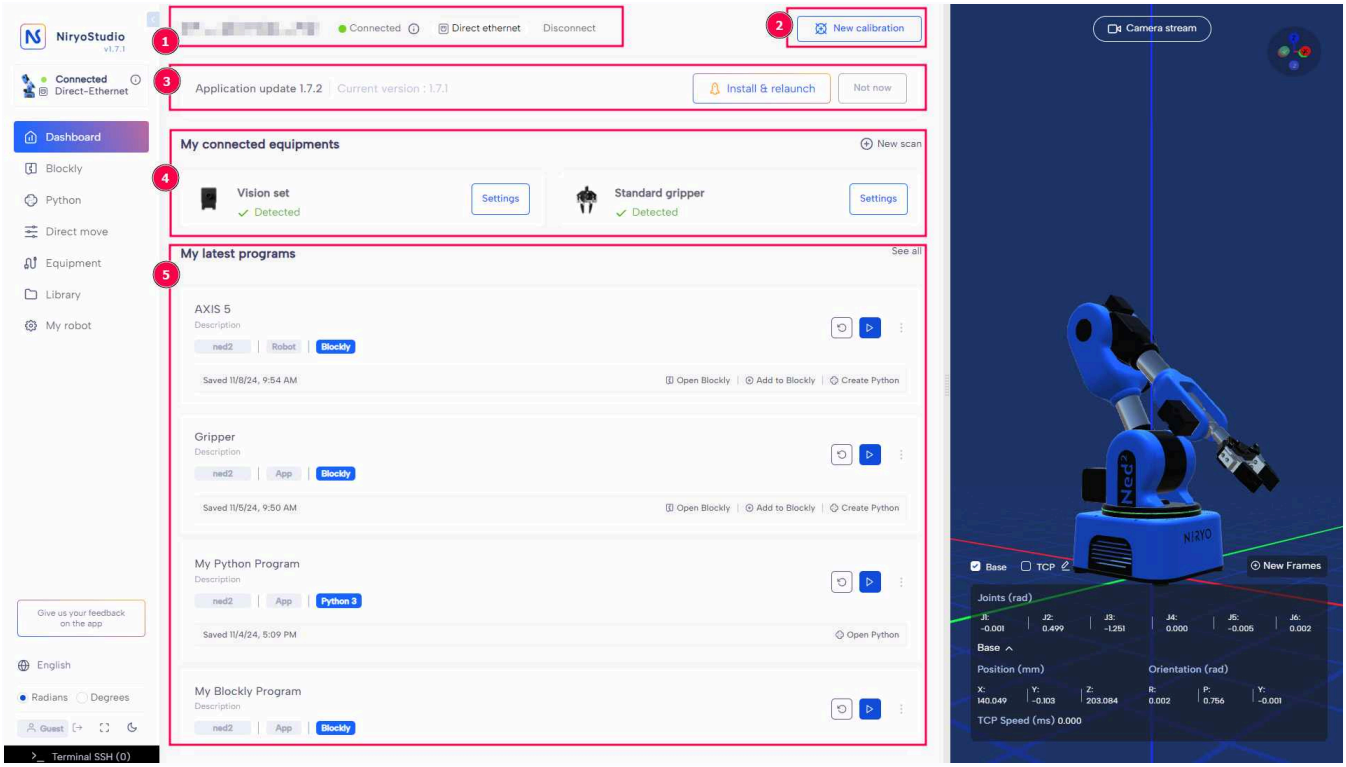

The NiryoStudio layout is divided as follows:

1. **Connection status**: Displays the current connection status with the robot.
   You can click on it to open the Connection dialog
2. **Main navigation panel**: This left sidebar provides quick access to the core functionalities within NiryoStudio.
   - **Dashboard**: Returns to this main screen.
   - **Blockly**: Opens the Blockly programming interface for visual programming.
   - **Python**: Direct access to Python programming for advanced users.
   - **Direct Move**: Allows manual control of the robot for direct movement commands.
   - **Equipment**: Provides options to configure connected tools or accessories.
   - **Library**: Access saved programs, positions, trajectory and other ressources.
   - **My Robot**: Displays robot details and settings.
3. **Feedback and Settings**: To manage application and account settings
   - **Feedback Button**: Users can provide feedback on the application, sharing suggestions or reporting issues.
   - **Language**: Choose between available language option (English and French).
   - **Angle units**: Select angle units for the interface (Radians or Degrees) based on user preference.
   - **Account settings** : Change your account informations like name, password, profile and guest session management.
   This section is unavailable if you are offline.
   - **Fullscreen mode** : Switch the application between fullscreen and windowed modes.
   - **Dark mode** : Switch the application between light and dark modes.
   - **SSH terminal**: Open a SSH terminal to the robot. (Unavailable if you are not connected to a robot).
4. **Main Panel**: Displays section content of the navigation panel, the dashboard in this case.
5. **3D Robot View**: Shows a 3D model of the robot, allowing users to visualize its current state and positioning.

Dashboard

The **Dashboard** is the central hub of NiryoStudio, providing users with quick access to tools, programs, and functionalities.

1. **Connection status**: Displays the robot name to which NiryoStudio is connected, the connection status, the connection mode, and the button to disconnect from the robot.
2. **Calibration:** Allows the user to initiate the calibration process for the robot. When clicked, it starts the procedure to ensure the robot movements are correctly aligned and calibrated for accurate performance.
3. **Update announcement**: Notifies the user when a new version of NiryoStudio is available. Clicking the button will install the new version of NiryoStudio.
4. **My connected equipments:** Displays a list of all the devices currently connected to NiryoStudio. This section shows the name, the status and settings of connected equipments. You can initiate a scan to detect newly connected equipment by clicking the **New Scan** button
5. **My Latest Programs:** Displays a list of the most recent programs created or accessed by the user. This section allows quick access to previously used programs for easy editing or execution. The complete list of programs can be found in the Library section.
