Python

Code your programs with Python ROS wrapper .

On the Python Tab you can code your programs with Python ROS wrapper. You also still have the visualisation window on the right.

Top bar

- **New :** Create new Python page
- **Open :** Open an existing Python program or **Import** a Python program from a XL file (XLM or Json). You can also **open a Blockly** program and it will automatically convert it into a python program .
- **Save as :** Save your current Blockly code (Even if all your program are Autosaved so you normally don't need to save it manually)

- **Export :** Export into .py format

Bottom bar

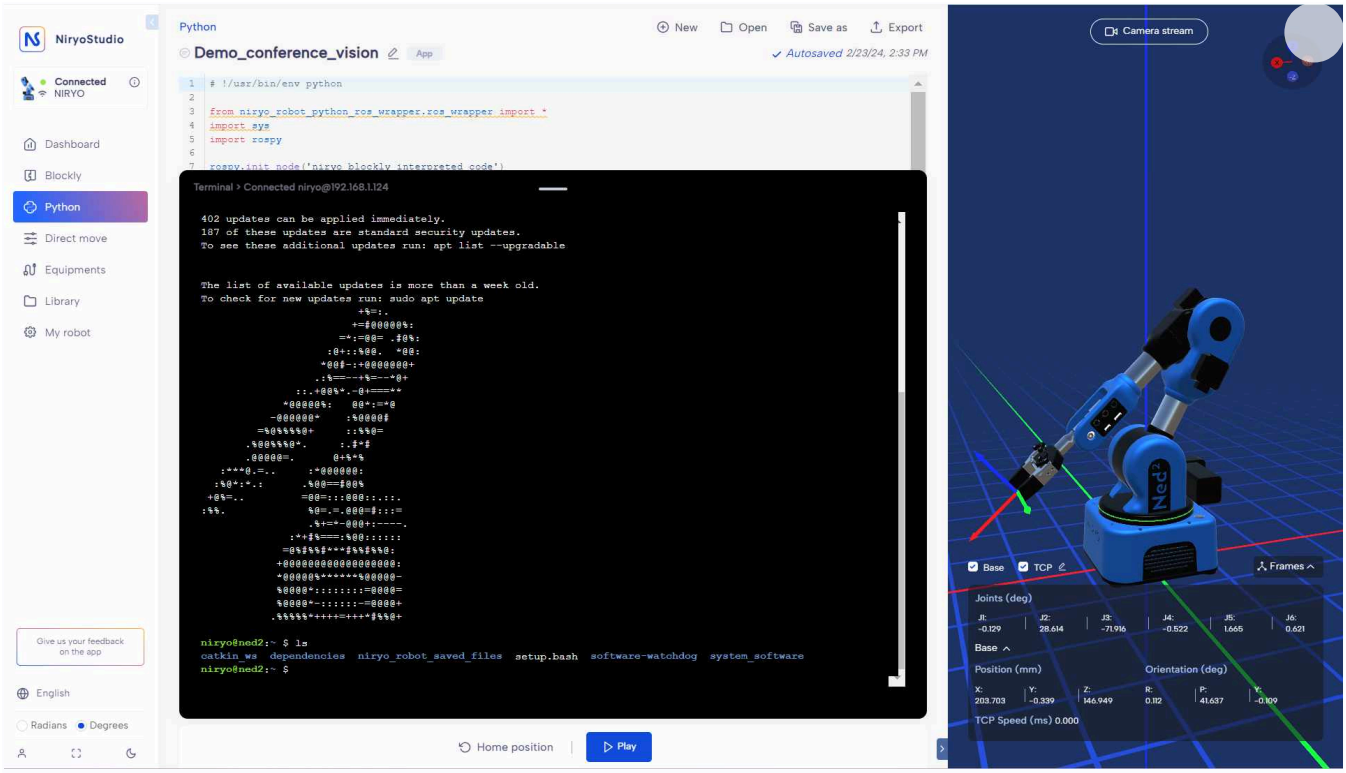

Home position button : Make the robot return to its Home position

Play : Run your current program

Terminal

> The use of this terminal is for more advanced users

You have access to the terminal which is an embedded SSH termnial of the robot. You can then access the files and folder of the robot but also use the ROS directly here. It ialso be useful for debugging.

API

To see the documentation for all the function available and start coding with Python, please check the Python API
