# Library

The Library allows you to find all the stored objects on the app or the Ned2. You will find the Programs, Positions, Trajectories, User Frames, Workspace and the Sounds.

## Programs

Similar to the Dashboard tab , this section allows you to quickly **run** or **open** the saved programs.

## Positions

You will find here all the saved positions created from programs or from the Direct Move section. You can quickly make the robot move to the position by pressing the **Play** button.

## Trajectories

You will find here all the saved trajectories created. You can quickly make the robot follow the trajectory by pressing the Play button.

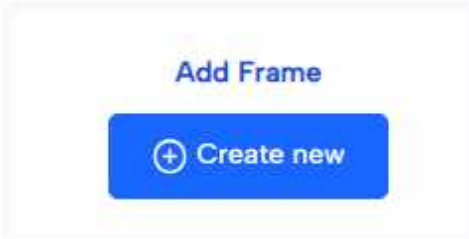

Return to the first position of the trajectory

Return to Home position

---

## User Frames

Here you can create your custom user frame. Click on **Create new** and follow the steps on NiryoStudio.

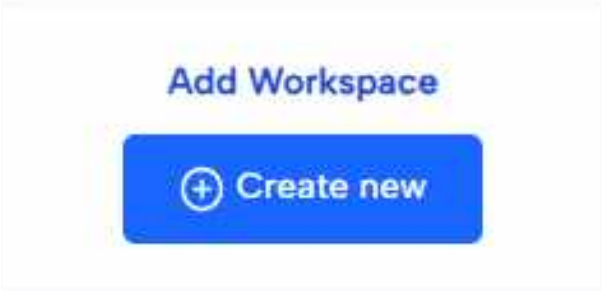

You will also find all the saved user frames created from programs or from this section.

---

## Workspace

Here you can create new vision Workspace. Click on **Create new** and follow the steps on NiryoStudio.

You will also find here all the saved Workspaces created. You can **click** on the **target** to make the robot move to it.

> If you are trying to reach te target for the test, be sure to get the calibration tool equipped. If you have a gripper equipped the robot may

## Sounds

On this section you will find all the sound saved on the robot. You can also import a custom sound from this section. The saved sounds can then be run from programs.
