Account settings

The Account Settings section allows you to update personal information, adjust preferences and manage Guest sessions.

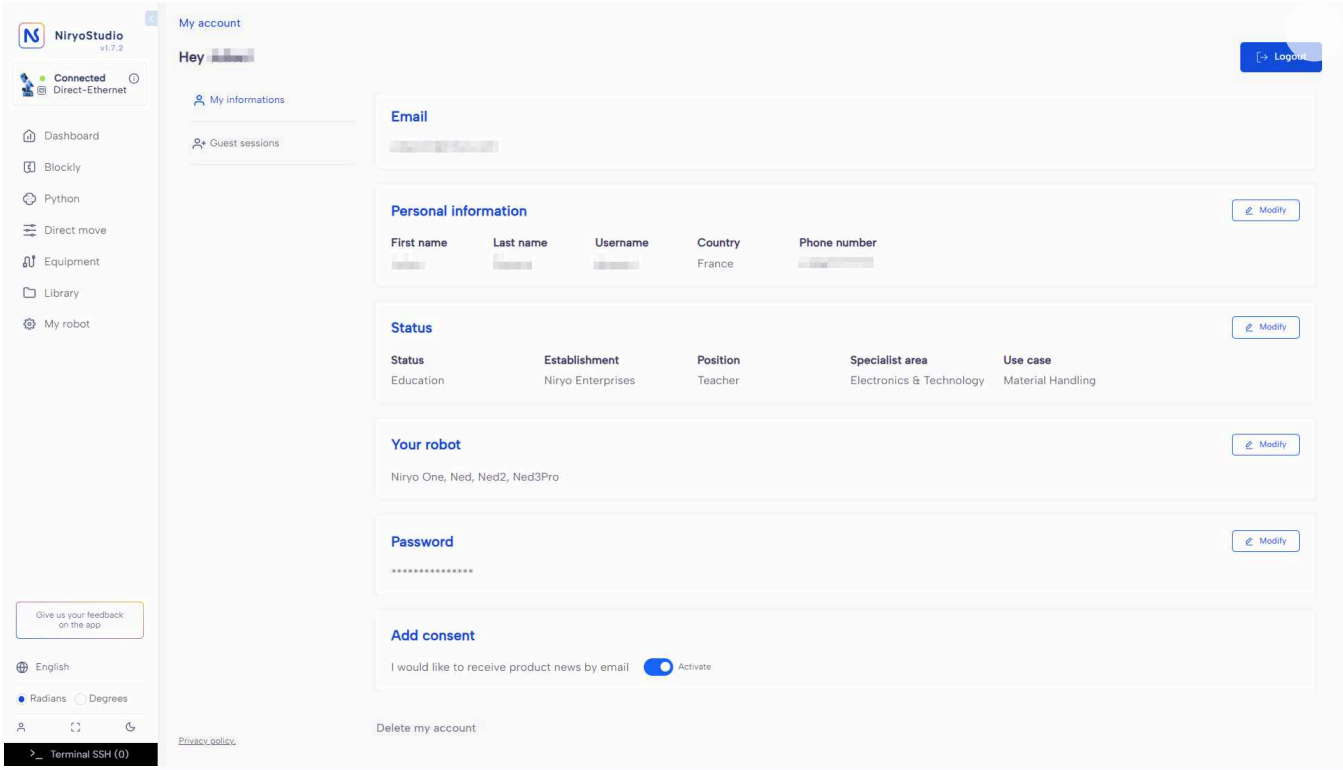

Account Settings are divided into two sections.

> An internet connection is required to access your account settings.

My informations

This section contains all the personal information you provided during the sign-up process.

You can update these details and change your account password as needed.

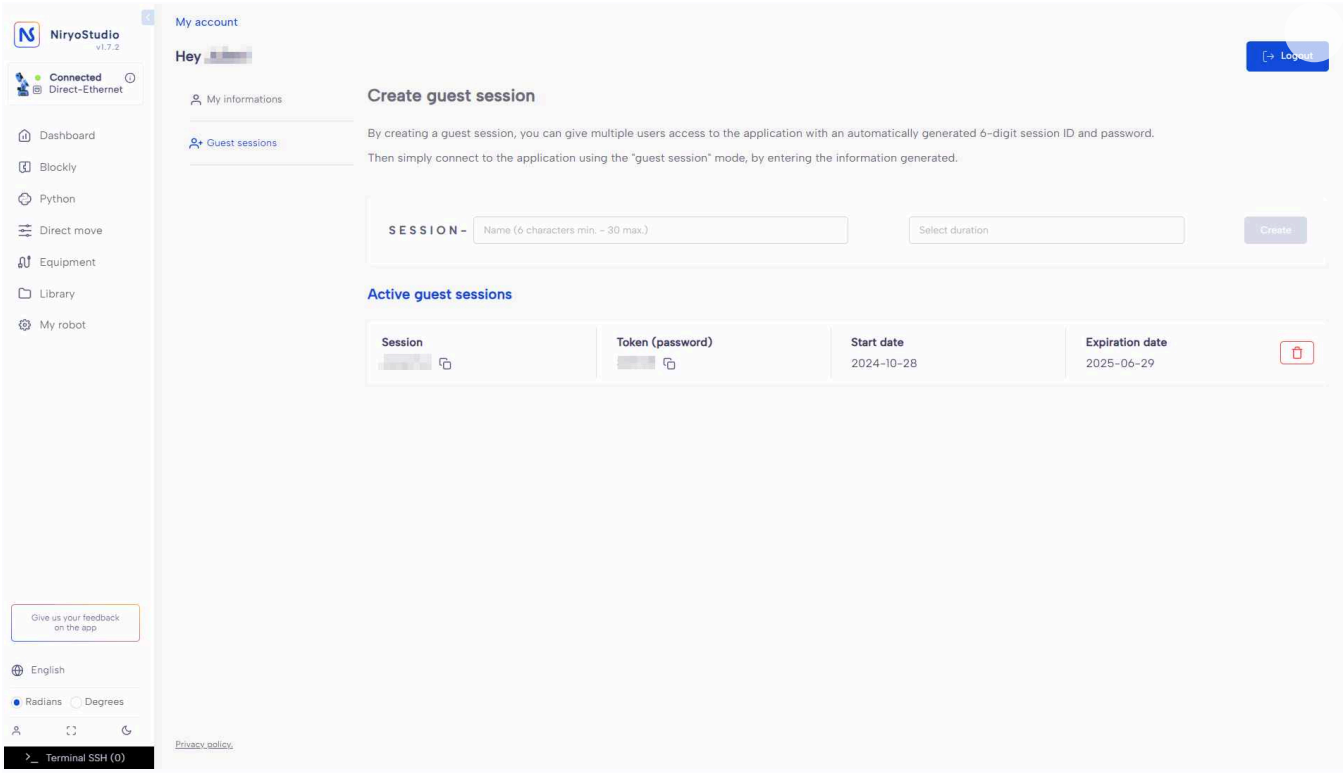

Guest sessions

The **Guest Session creation** feature allows temporary access to the application without requiring a full account setup.

This session is ideal for users who want to explore or test the platform without creating a permanent profile or for students. You don't have a limit on the number of guest sessions.

> Guest Session creation is reserved for users with a Teacher role

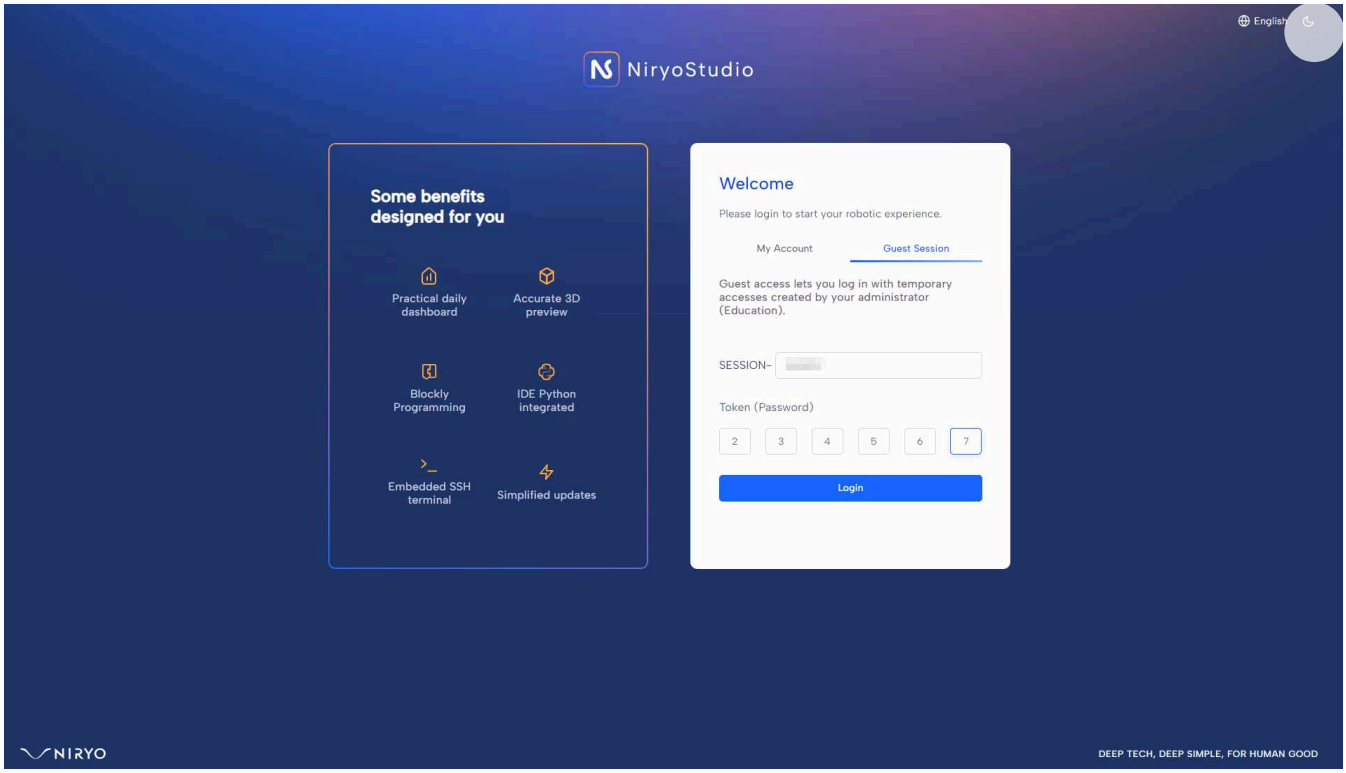

Using a Guest Session

To create a Guest session, enter a name and select a session duration. The Guest session will be valid only for the specified duration.

A token is generated for the session. You can share this token with users who need to use NiryoStudio without an account.

They can log in by entering the session name and token on the login screen.

For more information, you can consult the Guest sessions documentation.

> A user using a Guest session will be identified as **Guest** and will not have access to account settings.
